

WARNING!

DB75V Loop Stitching Heads

Machine operators and others in the work area should always wear safety glasses to prevent serious eye injury from fasteners and flying debris when loading, operating, or unloading the stitcher machine.

Do not operate this stitcher head without all stitcher machine guards in place. Do not modify the guards in any way. Always disconnect the power supply before removing any guards for servicing.

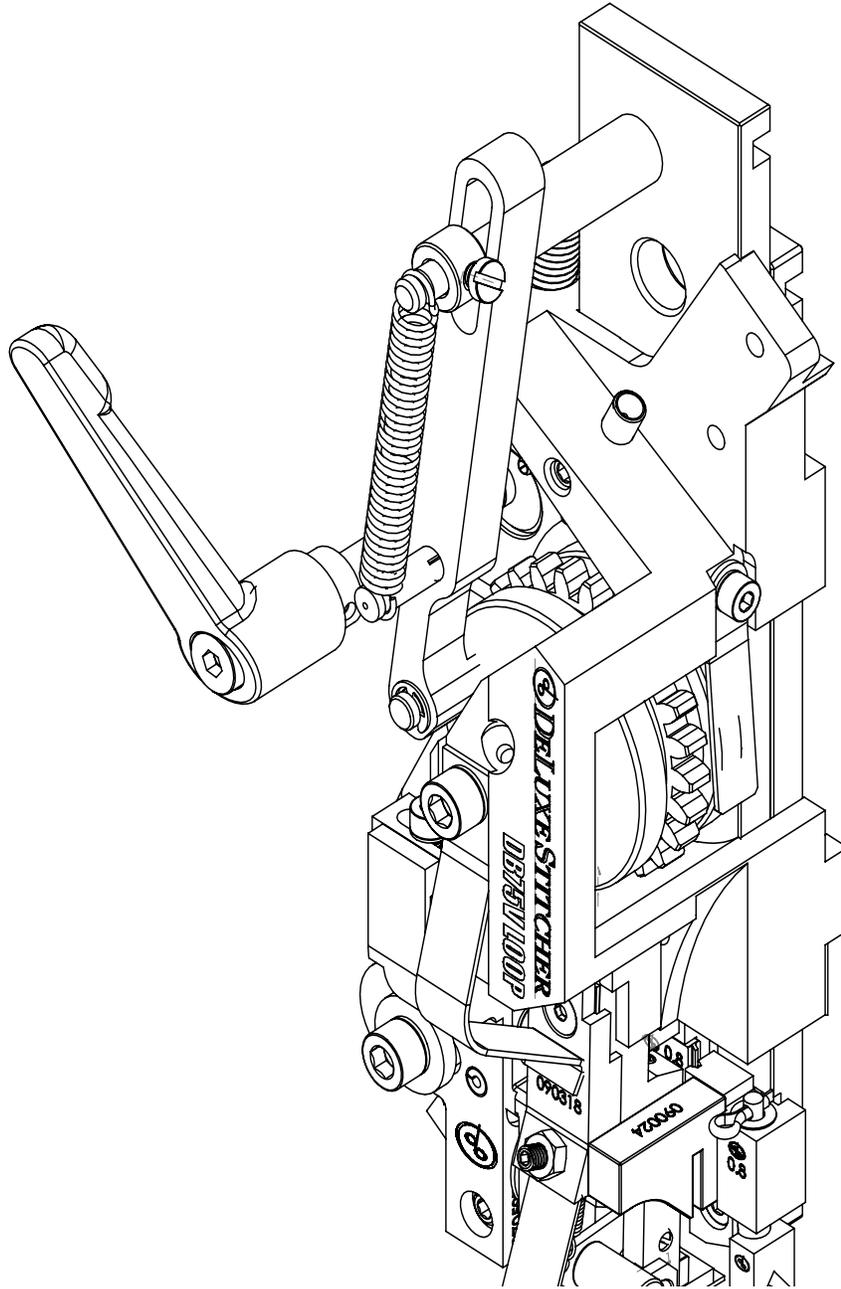

Never operate the machine with wire feeding through the head unless there is stock above the clinchers, otherwise serious damage may result.

Always turn power off when making adjustments. Always disconnect the power cord before any disassembly work.

Introduction

The DeLuxe Stitcher Müller-Martini Replacement Heads, along with a complete line of fully interchangeable replacement parts are available for current Müller-Martini users. Anywhere the HK75V is utilized the DeLuxe Stitcher DB75VHDL can be used.

The DB75VHDL has a stitching capacity from 2 sheets up to 3mm (.118”) and will accommodate 25 gauge round wire. The perfect replacement head for Müller-Martini Stitchers 221, 235, 321, 335, Prima, Bravo and more, the DB75VHDL is completely interchangeable.

The DB75VHD & DB75VSHD have a stitching capacity from 2 sheets up to 6mm (.236) and will accommodate wire sizes from 20-28 gauge round as well as 21 x 25 and 20 x 24 flat. This replacement head for Müller-Martini Stitchers 301, Tempo, Optima, Supra and the like, is also completely interchangeable.

Each of these heads weighs 7 lbs (3.2 kgs.) independently. The packaged shipping weight including the wire guide spring, clincher plate assembly and user manuals is 10 lbs. (4.5 kgs.).

Always use a high quality galvanized wire so the plating does not peel. Excessive peeling will cause clogging and the premature wear of many components. Use only specified wire gauge for .

2 sheets - 1/8” (3mm)25 gauge

NOTE: ALL PRODUCTS ARE MANUFACTURED BY DELUXE STITCHER.

.....	Fox, 221, 235
.....	Bravo
.....	Presto, 300
.....	Prima, 331, 335

*Actual stitching thickness capacity depends on the type of stock being stitched and the capacity of the saddle stitcher being used.

Installation

Pre-Inspection

Carefully inspect the condition of the shipping container before unpacking your replacement Head for Müller-Martini Stitchers. If the container is broken or damaged and there is evidence that the stitcher head may be damaged, immediately notify the carrier who delivered the head and the DeLuxe Stitcher Graphic Arts Representative from whom the head was purchased.

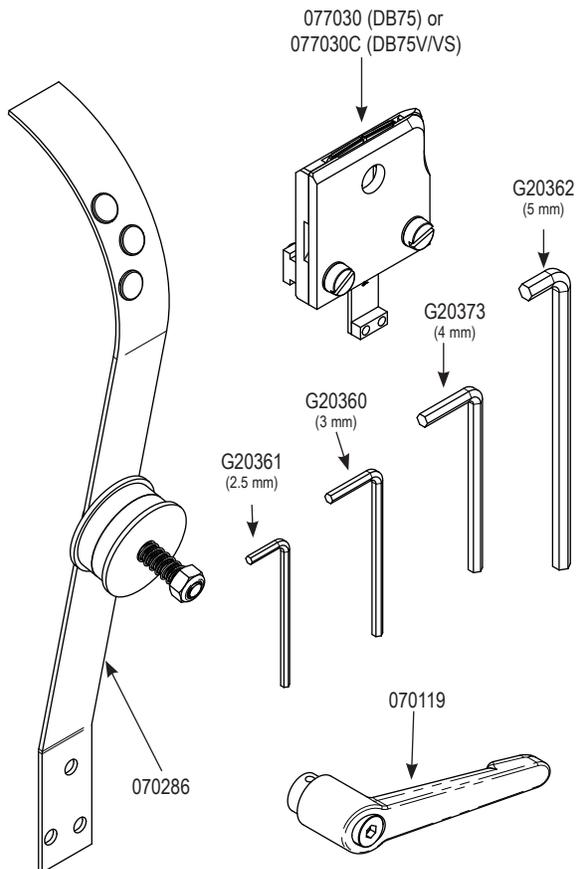

Figure 1 - Inspection

Inspection (Figure 1)

As you carefully unpack the replacement head, check to make sure all components were delivered and are in good working order. Use **Figure 1** in this manual for reference to the following pieces:

- Replacement head for Müller Martini Stitchers: DB75HD, DB75VHD or DB75VSHD
- Wire guide spring [070286]
- Clincher plate assembly [077030 or 077030C]
- Feed release handle [070119]
- 2.5, 3, 4 and 5 mm hex key wrenches [G20361, G20360, G20373 and G20362]
- Stitch samples

Mounting & Assembly (Figure 2-6)

Attaching the Feed Release Handle (Figure 2)

From out of the box, secure the **Feed Release Handle** [070119] to the stitcher head by slipping the handle over the **Feed Release Cam Assembly** [070118] and securing it with the provided screw, inserting it through the spring. Make sure the handle is angled toward the outside of the head when the screw is tightened.

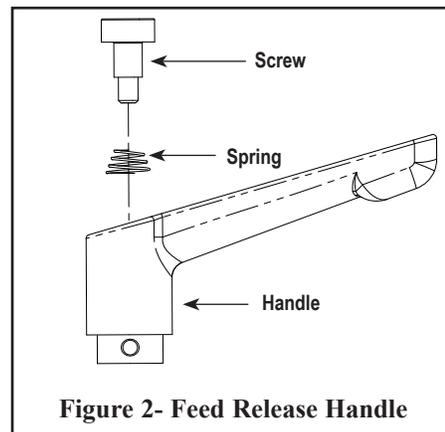

Figure 2- Feed Release Handle

Mounting the Head (See Figure 3)

Attaching the Wire Guide Spring (Figure 4)

Mounting the Clincher Plate (Figure 5 & 6)

Figure 5 - Mounting Clincher Plate Assembly

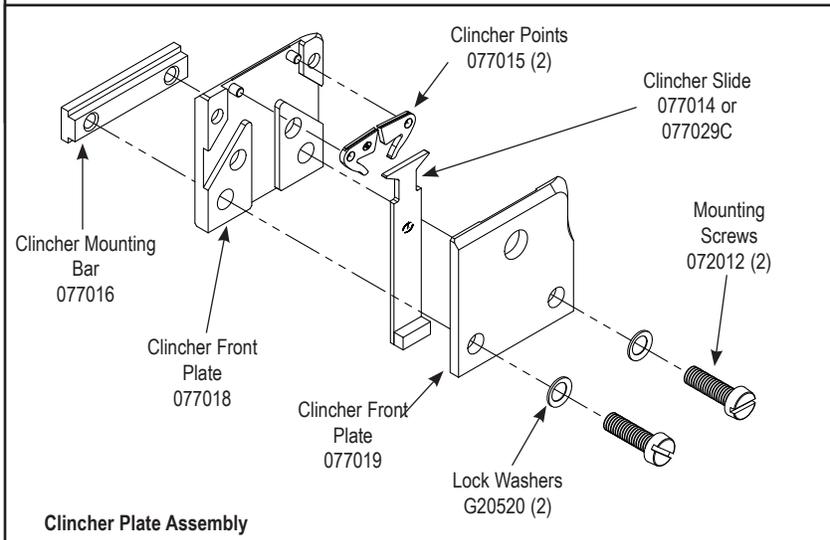

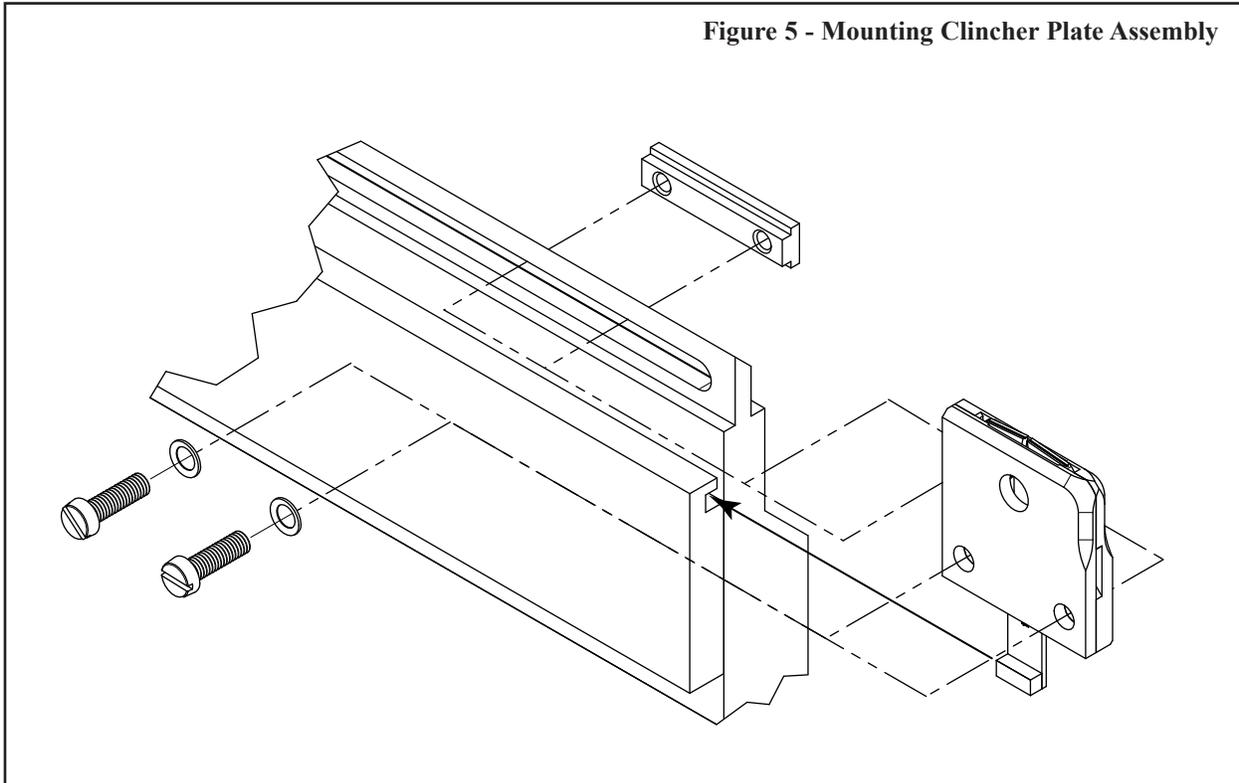

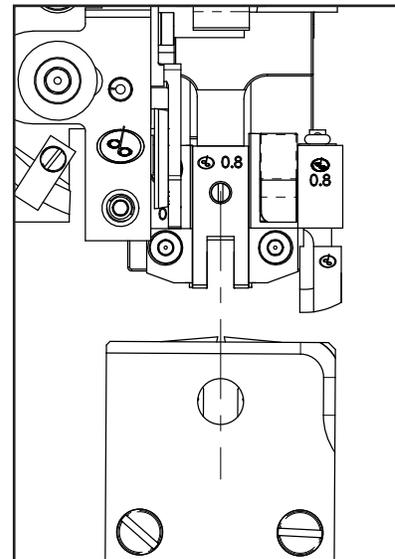

Figure 6 - Aligning Clincher Plate Assembly

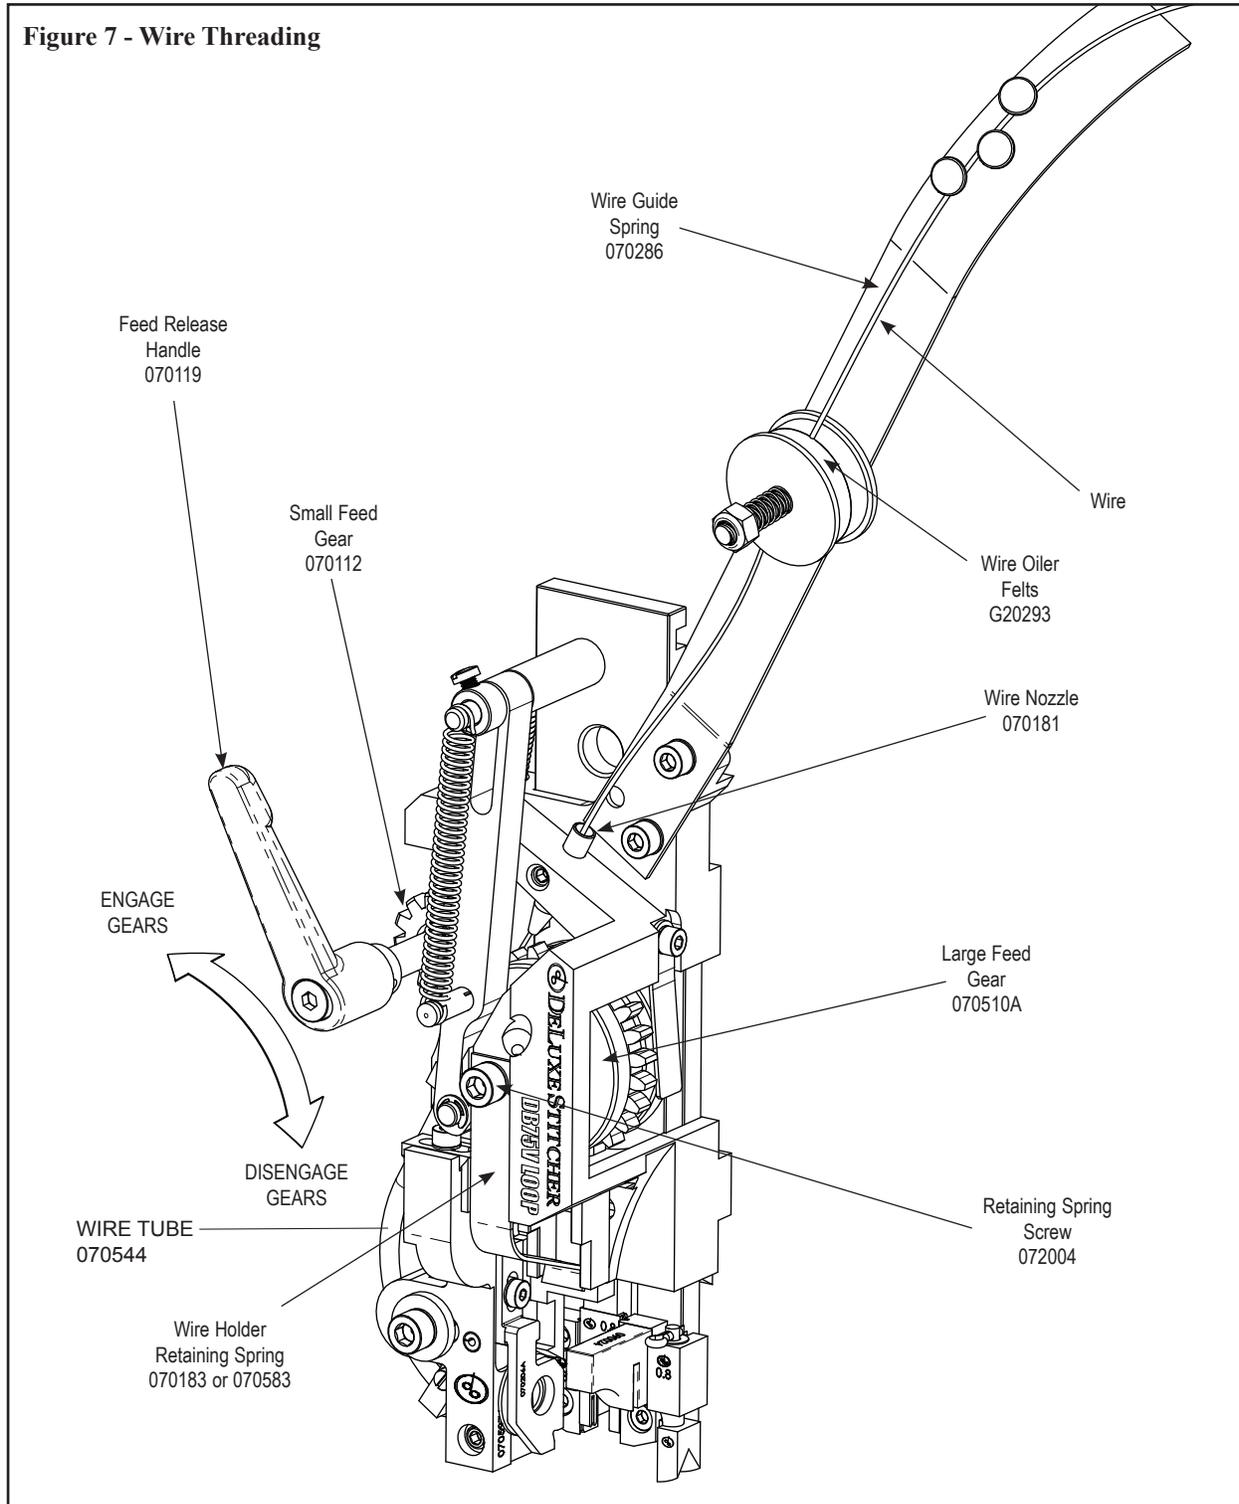

CAUTION

Always disconnect the power before assembling or making adjustments to your stitcher machine.

Operation

Wire Threading (Figure 7-8)

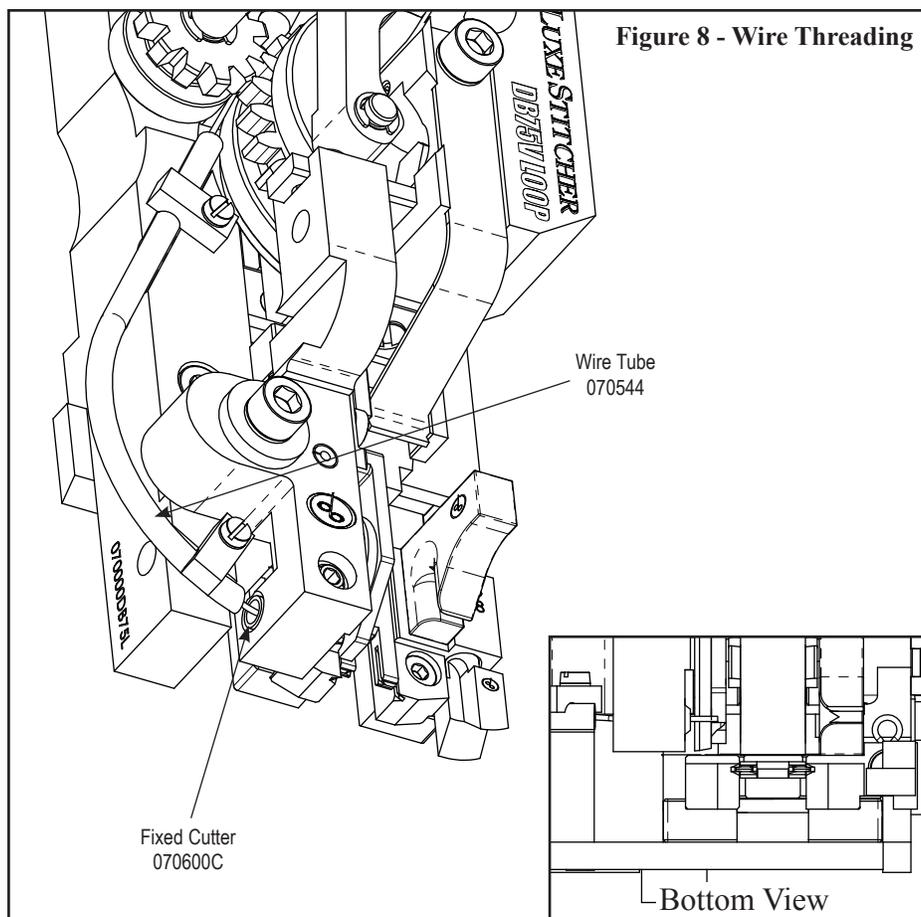

Figure 7 - Wire Threading

Before the Stitcher Machine is turned on, release the **Wire Holder Assembly** [070135A] (*Not shown-See Fig. 7*) secured by the **Wire Holder Retaining Spring** [070183 or 070583] by loosening the **Screw** [072004] on the front of the head. Thread the wire from the Spool under the studs on the **Wire Guide Spring** (070286), between the **Wire Oiler Felts** [G20293] on the Spring and into the **Wire Nozzle** [070181]. Turn the **Feed Release Handle** [070119] clockwise so that the **Small Feed Gear** [070112] is disengaged from the **Large Feed Gear** [070510A].

Continue to push wire through the Replacement Head until the end of the wire passes the Small and Large Feed Gears, enters the **Wire Tube** [070544] and begins to come out the bottom of the wire tube. Then using a small screw driver, wedge the wire up until it enters the **Fixed Wire Cutter** [070600C]. Engage the Small and Large Feed Gears by turning the **Adjustable Lever** counter-clockwise.

Note: It will take two full cycles for the proper length staple to come out of the head.

Wire Straightening (Figure 9)

Once threaded, cycle the Stitcher Machine and watch the wire feeding out of the the **Cutter Box** [070197A or 070597A] to the right of the **Moving Cutter** [070145C]. The wire should be traveling in an approximate horizontal direction when exiting the Cutter Box.

Top-to-Bottom Adjustment

If the wire is feeding in an upward or downward direction, the **Wire Straightener** [070206A] will have to be adjusted. Loosen the **Screw** [G20589] securing the Wire Straightener to the Cutter Box. If the wire is feeding in an upward direction, slide the Wire Straightener down slightly.

Conversely, if the wire is feeding in a downward direction, slide the Assembly up slightly. Make sure to tighten the Screw after every adjustment to see accurate results. Allow enough Wire to be fed through the Head so that an accurate assessment can be made. Make sure the ends of each cut piece of wire is free of burrs, which would negatively affect the driving and clinching of the formed Wire.

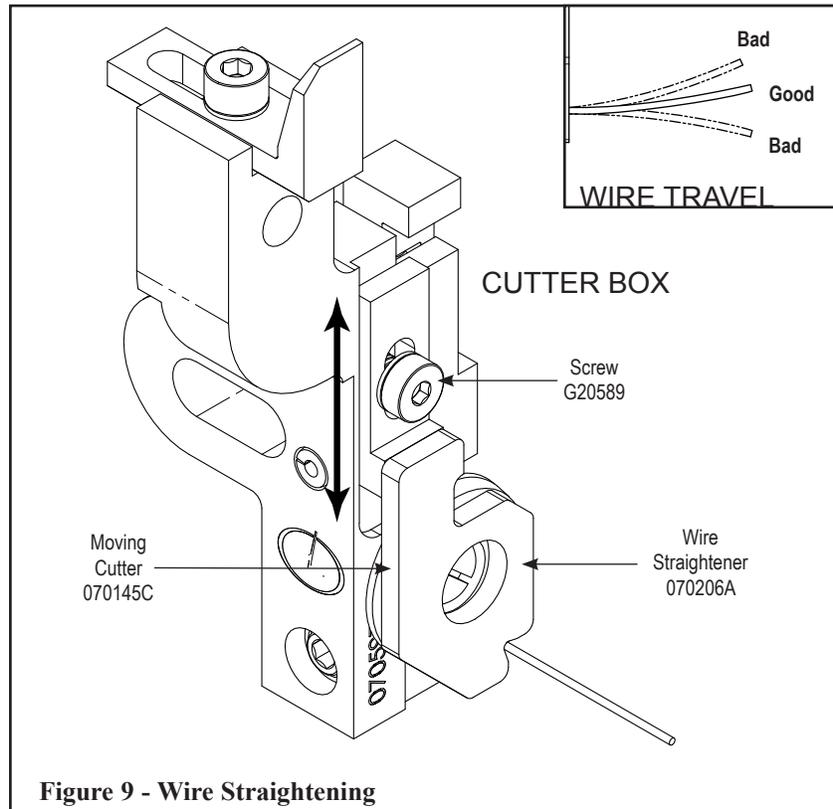

Figure 9 - Wire Straightening

Make sure the Wire Holder Assembly has been removed before tripping the Machine to avoid jams and the chipping of parts.

⚠ WARNING

Adjusting the Length of the Right Leg (Figure 10-12)

Setting the Stitch's Right Leg (& Setting It's Center)

If after a few stitches, the length of the stitch's right leg is too short or too long, you will need to make adjustments. Adjustments are always made to the right leg to compensate for the length of the left leg. First adjust the stitch's right leg to match the left and then make adjustments for the overall length of the stitch or wire draw.

Power off the Stitcher Machine and release the **Extension Spring** [074002] from the **Feed Gear Operating Lever Pin** [043002] on the Replacement Head. Disengage the Small Feed Gear from the Large Feed Gear by turning the **Feed Release Handle** [070119]. Push the Feed Gear Operating Lever [077001] down which will move the pin on the **Feed Gear Pinion** [070111A] out of the way of the Feed Gear Stop [077026]. Loosen, but do not remove, the **Screw** [G20589] securing the **Feed Gear Stop** to the top of the Cutter Box Assembly. If the legs of the stitch are not even, do one of the following:

If the right leg is too short, slide the Feed Gear Stop to the left slightly, to lengthen it.

If the right leg is too long, then adjust the Feed Gear Stop slightly to the right.

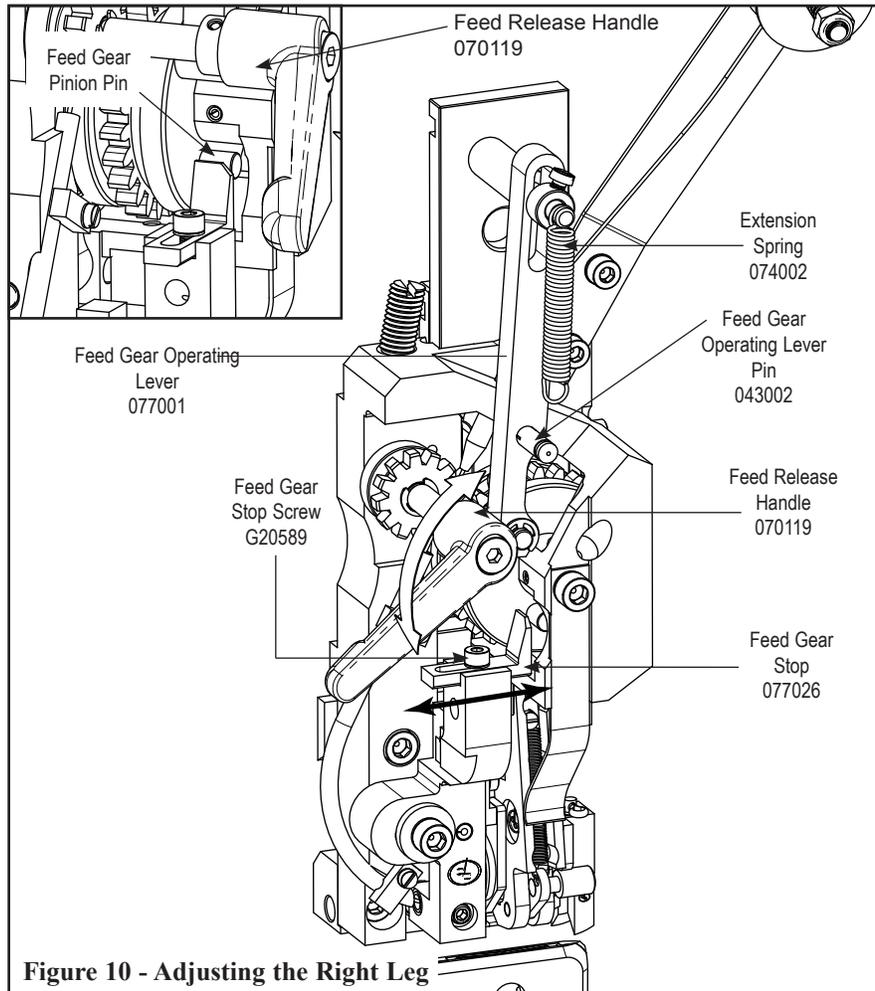

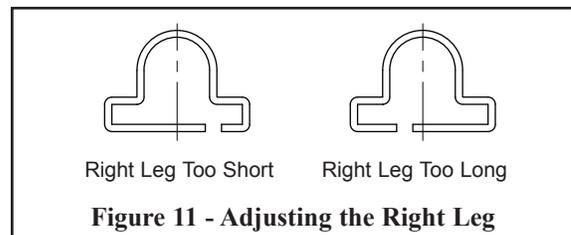

Figure 10 - Adjusting the Right Leg

Right Leg Too Short Right Leg Too Long

Figure 11 - Adjusting the Right Leg

Always disconnect the power before assembling or making adjustments to your stitcher machine.

CAUTION

Power on the Stitcher Machine and jog the Stitcher to observe the length of the stitch's right leg after the initial adjustment. Continue to make adjustments and re-test the Head until the length of the stitch's right leg is satisfactory.

When set, any one of the stitches below are regarded as good stitches with the two on the left needing the next step in adjustment and the two on the right as properly set (with amount of gap a matter of preference).

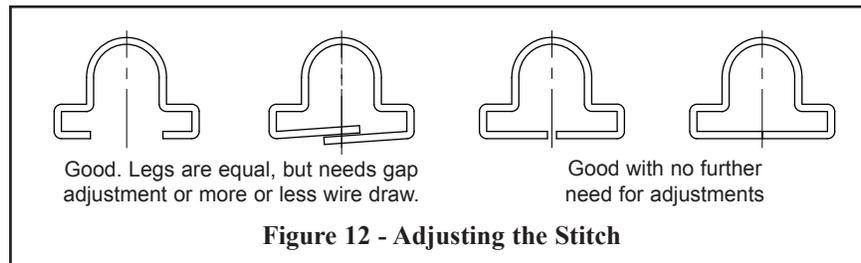

Figure 12 - Adjusting the Stitch

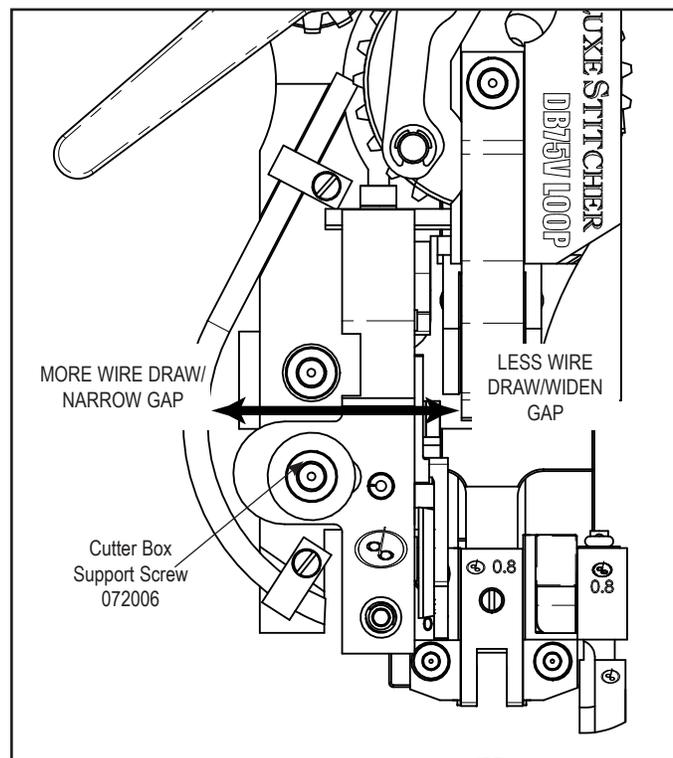

Adjusting the Stitch Gap or Wire Draw (Figure 13)

Adjusting the Overall Length of the Stitch (Adjusting the Stitch Gap)

To change the overall length of the stitch, or more specifically to change the gap between the legs of the stitch, the position of the **Cutter Box** must be adjusted. Begin by releasing the **Extension Spring** from the **Feed Gear Operating Lever Pin**. Disengage the **Small Feed Gear** and the **Large Feed Gear** by turning the **Feed Release Handle**. Push the **Feed Gear Operating Lever** down which will move the pin on the **Feed Gear Pinion Pin** out of the way of the Feed Gear Stop. Loosen the **Screw [072006]** securing the Cutter Box to the Stitcher Head.

If the legs are too short, increase the overall length of the stitch's legs by sliding the Cutter Box to the left and if too long, to the right. Tighten the Screw, attach the Extension Spring and power on the Stitcher Machine. Trip the Stitcher to observe the overall length of the each stitch after the initial adjustment. Repeat as necessary.

Figure 13 - Adjusting the Stitch Gap

Adjusting the Clincher Points (Figure 14)

If the clinch on the staple is not tight enough, the **Clincher Points** [077015] have to be raised. Conversely, if the clinch is too tight, the Clincher Points have to be lowered. This adjustment is made on the Stitcher Machine and so cannot be completely explained in this manual as each individual Machine is different.

The final position of the Clincher Points should be flush (or slightly above flush) with the Clincher Plates. The best way to see the position of the Clincher Points is to jog the Machine where the Stitcher Head is mounted. When the Driver is at the lowest position of its stroke, the Clincher Points are at their highest position. Jog the Stitcher Machine until the Stitcher Head is just past this point to reveal the Clincher Points' position. To be sure that the Points are at the best position possible, run a few test stitches and compare the clinched staples.

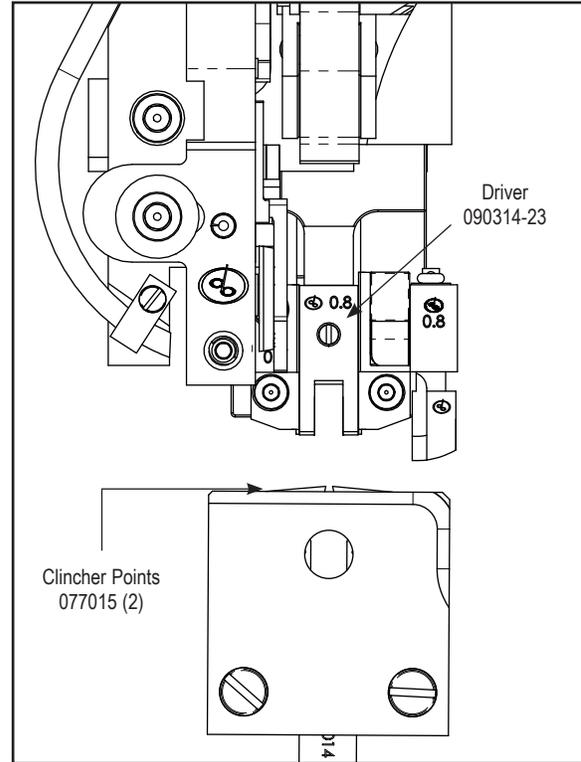

Figure 14 - Adjusting Clincher Points

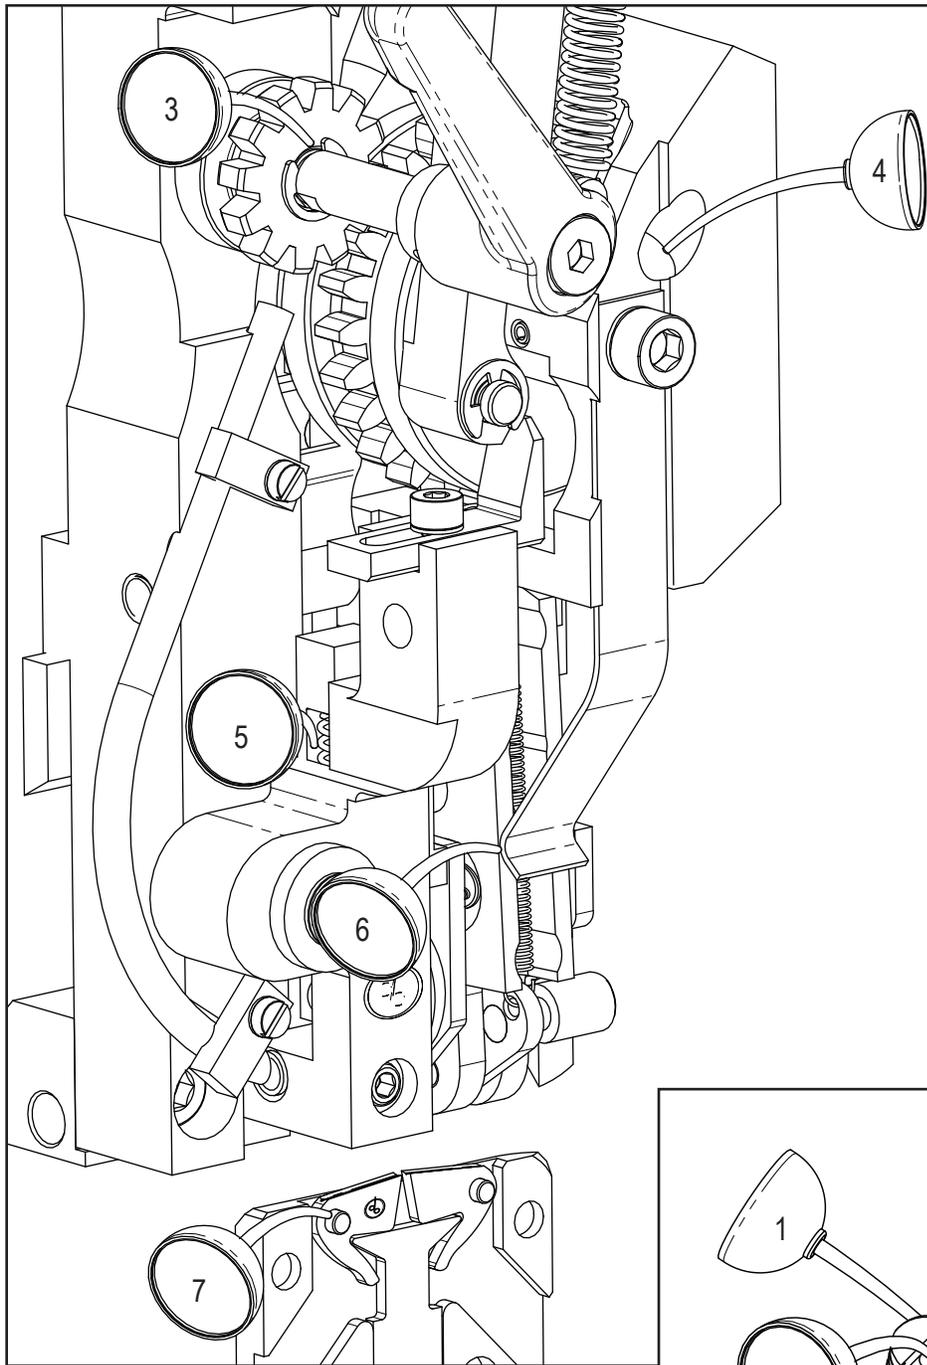

Always disconnect the power before assembling or making adjustments to your stitcher machine.

CAUTION

Maintenance

Lubrication (Figure 15)

Use any standard S.A.E. #10 oil for lubricating the heads. Heads that are in constant operation should be lubricated daily. Heads that are operated periodically should be lubricated every five pound wire spool change or every month, whichever comes first. Usually, only a drop of oil is required at each lubrication point. Care must be taken that those parts of the head that contact the work to be stitched are free of oil. Lubricate regularly instead of excessively. Excessive lubrication will result in work becoming spotted with oil. Use one drop of oil in the following lubrication points:

1. At the top of the **Bonnet** [070000 or 070500] on either side of the **Driver Slide** [070551A or 070151A] and **Bender Slide** [070162A or 070562A].

2. In the hole of the **Feed Cam Plunger Bushing** [077010].

3. On the shaft of the **Feed Release Cam Assy.** [070118] in the front of the Small Feed Gear [070112]

4. The oil hole in the front of the Bonnet [090500] - this lubricates the **Clutch Bearing** located inside the Feed Gears

5. On the **Cutter Operating Lever** [070230] behind the

Cutter Box [070197A or 070597A].

6. In between the **Wire Holder Retaining Spring** [070183 or 070583] and the **Wire Holder** [070135A] and on the **Hook Pivot Pin** [073009] in the **Wire Holder** [070135A]

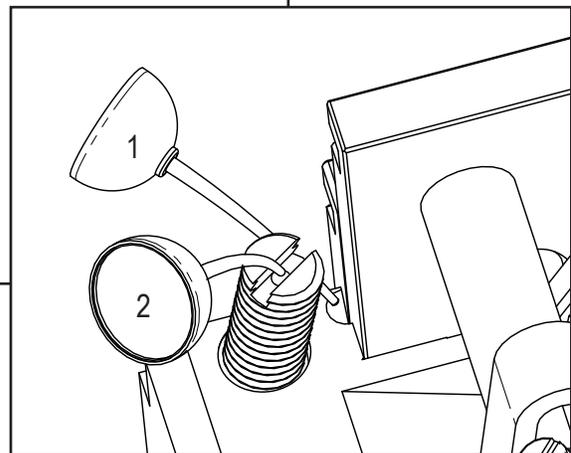

Figure 15 - Lubrication and Cleaning

7. On each of the **Clincher Point Pivot Pins** [077018-2] on the **Clincher Back Plate** [077018]

Feed Gear Information (Figure 16)

Correct clutch assembly.

CAUTION

Always disconnect the power cord before any maintenance is done or adjustments are made to the Müller Replacement Head

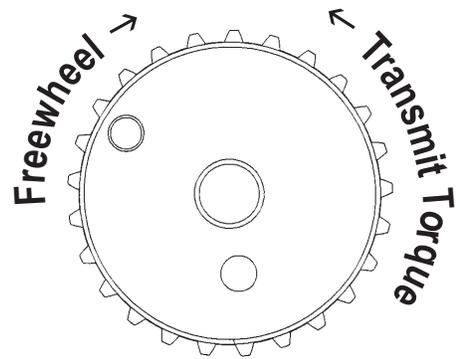

Figure 16 - Feed Gear Pinion Assy

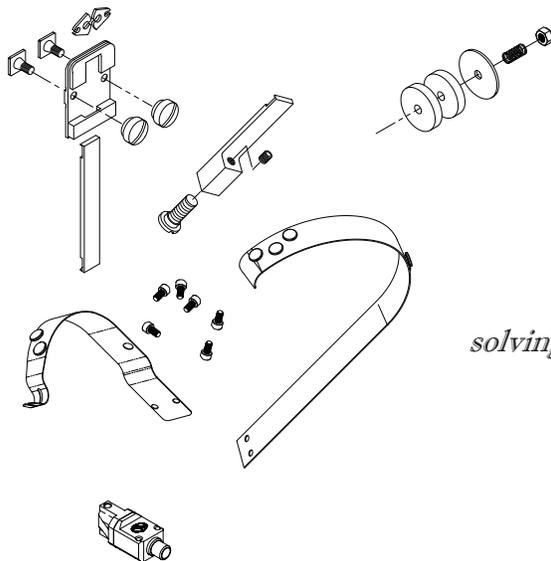

Ordering Spare Parts

In time, you will need to replace some parts in your DBS75LOOP style Stitcher Head. When this happens, first locate the needed part in one of the following diagrams. Then locate the DeLuxe Stitcher part

number and contact your Graphic Arts Representative to order the part by the part number,

DELUXE STITCHER

???

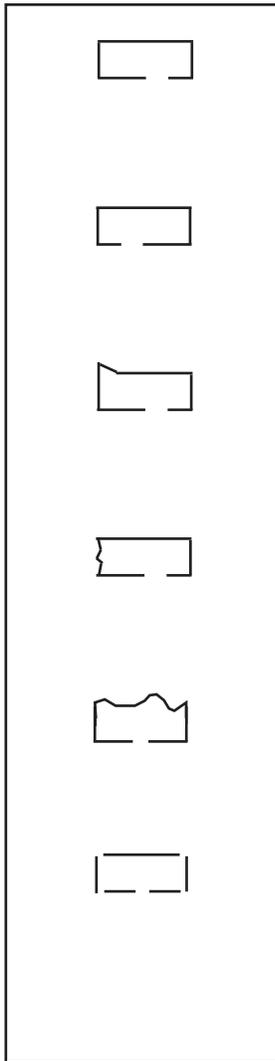

solving your wire stitching needs for 125 years...

Troubleshooting (Figure 17)

The quality and quantity of work that can be produced with the Müller Replacement Head is dependent upon the operator making all adjustments as accurately as possible and carefully maintaining the head. The cause of staple imperfections usually can be traced to inaccurate settings or normal wear of moving parts. In the event of trouble of this nature occurring, the operator can, by referring to the following troubleshooting chart, quickly locate and remedy the cause or causes of the trouble.

The following is a brief list of problems and possible solutions which should cover the majority of situations encountered when stitching with the DB style Stitching Heads.

PROBLEM: Right Leg Short

SOLUTION: Move the Feed Gear Stop to the right, slightly.
(See page 11)

PROBLEM: Right leg Long

SOLUTION: Move the Feed Gear Stop to the left, slightly.
(See page 11)

PROBLEM: Corner Buckled

SOLUTION: Check the Driver for a chipped corner and rotate or replace it if needed. Use a heavier gauge wire.

PROBLEM: Leg(s) Buckled

SOLUTION: Check the Wire Cutters and Wire Cutter Operating Slide for wear and rotate or replace if needed. Use a heavier gauge wire.

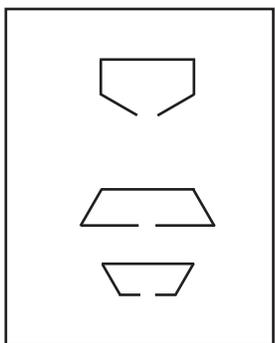

PROBLEM: Crown Buckled

SOLUTION: Check Supporter Spring tension on the Head. If it is too loose replace it.

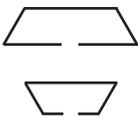

PROBLEM: Stitch in Pieces

SOLUTION: Clean and lubricate the Head. Check for hard or brittle wire and replace. Check the tension of the Wire Holder Spring and replace Spring if too loose. Look for wear in Wire Holder pivot point in Bonnet.

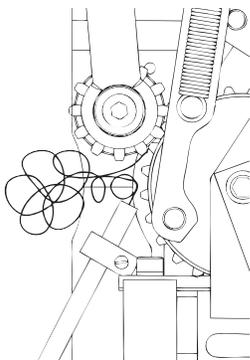

PROBLEM: Loose Clinch

SOLUTION: Raise the Clincher Points. (See page 15)

PROBLEM: Legs are Spread or Contracted

SOLUTION: Make sure the wire is feeding straight through the Head. (See page 10) Check the Wire Cutters for wear and rotate or replace if needed. Check the Formers for wear in the grooves and replace if needed.

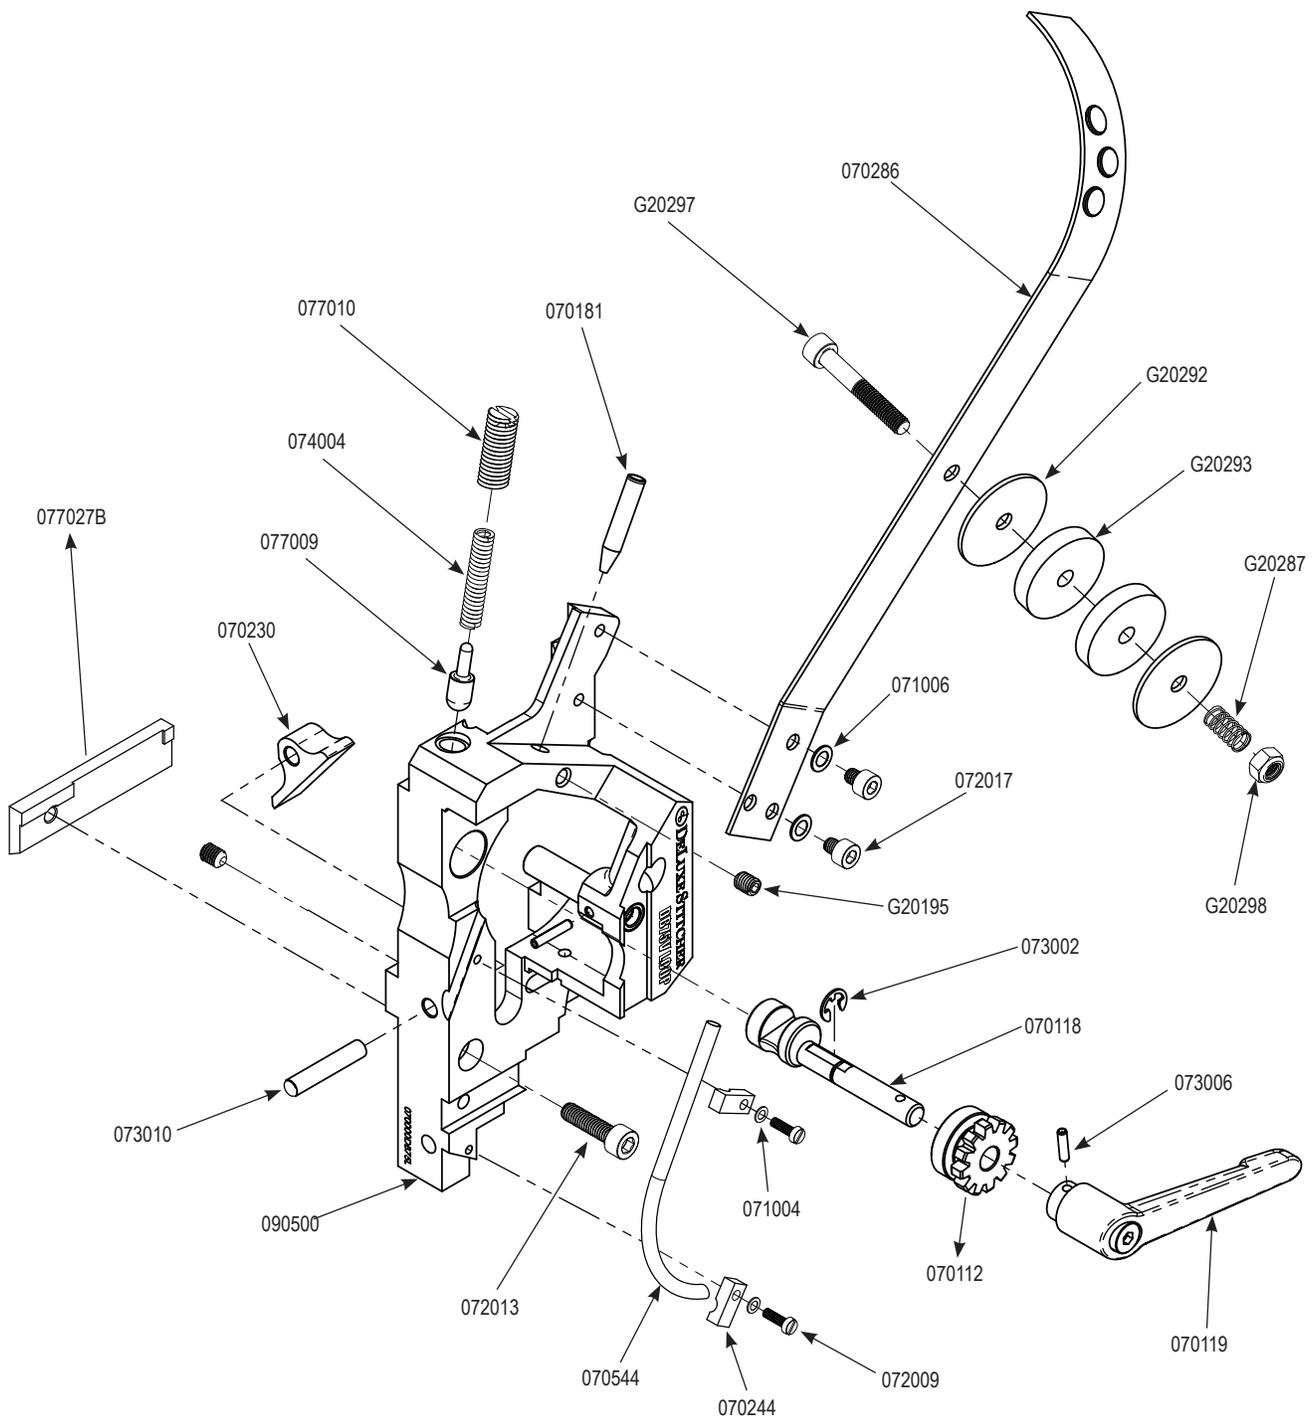

PROBLEM: Wire jam near Feed Gear

SOLUTION: Tighten Cutters. Check for the following worn parts and replace if necessary. Fixed Cutter, Moving Cutter, Cutter Operating Slide, Cutter Operating Lever, Bender Slide Insert, Wire Guide, Hook, Hook Pivot Pin and Feed Gear Friction Strip.
